Эллэ Уигур Аят Эллэ

An informational data bank is in the cells each person, in the genes of each person Эллэ. All information about origin and development of the person, the earth and Selennaya, all history of their development is placed into one's genes Эллэ . Access to the informational data bank opens gradually as consciousness of the person clears. Opening of all the information is impossible without this process Эллэ . The informational data bank works at different wave levels beginning from the lowest waves to the highest waves Эллэ . Their range is vast. Work of Person begins from low waves Эллэ . Besides these waves work at different frequencies Эллэ . One wave can work at different frequencies Эллэ . And correspondingly information is different by level of complexity Эллэ . Initially at the first stages of work information goes in parts from informational data bank Эллэ . Genes begin to issue information, waves begin to radiate definite information as consciousness becomes ready to receive this information Эллэ . Later perception of information by consciousness of the person happens Эллэ . Work connecting with issue of next part of information goes gradually. Information goes in parts so that the consciousness of the person could have time to absorb it Эллэ . If Consciousness has not perceived definite information, work connecting with further clarification of Consciousness continues and this definite information “matures”, waits for the moment when it can be perceived Эллэ . Only when consciousness of the person is cleaned and prepared does enough information becomes available to go in different directions Эллэ . Gradually the person begins to receive all information which is necessary for him Эллэ . The informational data bank opens gradually because a quick, jerky opening would be like an explosion which the consciousness of the person and his physical body could not bear. Cells should be ready because of the opening of informational data bank means an unfolding of a huge potential of energy which did not work earlier. The cells of the person would not bear quick splash of this internal energy. This internal energy unfolds gradually, its issue goes in parts so that genes and cells can have time for reconstruction Эллэ , so that the person can realize this process himself Эллэ , so that Person can understand what processes are happening in his organism. The unfolding of this internal energy, the reconstruction of organism of the person mean that the person goes to new level of work Эллэ . A moment will come when quantitative accumulations will turn into quality and a leap in the development of the person, the earth and Selennaya will be Эллэ Эллэ.
